

### AMENDMENTS TO THE SPECIFICATION

Please replace the paragraph appearing at page 2, line 14 - 21, with the following amended paragraph:

Further, in the above patent publication, any specific amount of the antibodies bound to the liposome is not explained. The publication explains that 0.1 to 20 mole% of the thiolated antibodies were reacted with 1 mole of maleimide group of the maleimided lipid (corresponding to 0.3 to 60 mg per 100 mg of the total lipids). In the method for preparing the liposome specifically described in the examples, 5 mg of the antibodies were bonded to 100 mg of the total lipids (corresponding to ~~1.7~~ 3.3 mole% based on the maleimided lipids). However, the above publication contains no specific disclosure as to an amount of bonding other than the above.
